Urgent Request

Wednesday, March 4, 2026 10:00 AM

Subject	**Urgent Request**
Link to Outlook Item	Click here
From	Bossemeyer, Matthew
Required attendees	Hall, Brian (Accepted in Outlook)
Optional attendees	Bichler, Joe (Accepted in Outlook)
Meeting Date	**3/4/2026, 10:00:00 AM**
Location	**Microsoft Teams Meeting**

Confirm a few details per below.

“Morning Matt - reaching out to you at Lindsay's direction. Bruce has an urgent request and he essentially wants to know how our top tier national pricing by contract ranks in our benchmarks. Are we at 25th, 10th, 38th, etc. Is there any easy way to get to that from the back end where you can aggregate all volume on PP, AD, and SP contracts (separately to evaluate each agreement) to weight the products on the agreement and then compare best national tier, AD tier and SP tier to our benchmarks and come up with a ranking for where the agreement falls as an aggregate weighted measure (not by SKU)?
"

Unknown Speaker 00:00
You

Unknown Speaker 00:20
I

Unknown Speaker 00:40
You

Unknown Speaker 01:00
uh,

Unknown Speaker 01:11
well, hello, all right,

Unknown Speaker 01:14
good. I get me some time with you this week. I

Unknown Speaker 01:17
like it. Yeah, I've been looking forward to reconnecting since we got introduced months ago. That sounds like finally coming together. So I'm looking forward to it as well.

Unknown Speaker 01:27
Yeah, so crazy. How fast time flies. Sometimes, if you look up, you're like, boy, it's gone by a month already, then another month. It's just.

Unknown Speaker 01:35
Deep.

Unknown Speaker 01:37
You know what this one's about a little bit, or is the context what Brian sent

Unknown Speaker 01:41
you had a little bit. So Bill texted me. He was traveling, you know, and Jim Lynette and I connected this morning. He talked to Bruce. So I've got bits and pieces. I mean, the broader idea makes sense, like, if we we've been looking at it for years, seeing how, you know, national doesn't really say much against what I would think the market entry level prices, but, but makes sense where it's coming from. But I don't have all the details. No.

Unknown Speaker 02:08
Okay, all right. Morning, it's the brain trust. Martin, I definitely need to exit this group, then Brian for sure. So let me just hop off real quick. You had the conversation with Bruce. You give us the download I've already given Matt my interpretation of it, and I think what he might be able to help us with far faster than that team could crush manually. But I wanted you to weigh in too so I didn't miss anything. Yeah, all right, let's do it. Let's do it. So the originations request was last month, and so let me, let me find that dashboard.

Unknown Speaker 02:43
Did you send that? I sent that to you. That's going to speak to what we're talking about here. So,

Unknown Speaker 02:50

Unknown Speaker 02:51
yeah, I sent it last night. Here we go one moment though, coming up. Give

Unknown Speaker 02:57
you something to look at, all right, so this is a dashboard out of the valley assurance group that we have created, essentially Matt, what this is talking about on this left hand side up here is centered around taking the surpass portfolio and benchmarking it against our external source provider that we have and looking at how it's comparatively in that metric. So H, IQ, takes best in class, 90th percentile, 75th, 50th, whatever have you. In these percentiles, we align the percentiles of the external benchmarks against the portfolio. So the contract price unsurpassed is $5 we are comparing that $5 against what the external benchmarks are at their bottom low, so they're very benchmark low the sun drive is essentially compared to that 90th percentile, or 10th percentile, whatever you want to say. And then national, we're looking purely at the 25th percentile and comparing, if we compare our surpass contracted price points against the external benchmark low price points. There's a 6.9% savings in the aggregate of all the contracts in that portfolio, and we've reviewed 98% of it so far. So

Unknown Speaker 04:26
um, healthcare IQ by 7% and surpass on a weighted spend basis. That's what that's saying. Yeah, yeah, yep. So that's,

Unknown Speaker 04:37
that's this bucket here, so that the send drive is looking at the 10th percentile, and the National is looking at 25th so if we move the entire national portfolio of all the contracts, and we've looked at 46% spend so far, where it would, it would be about 11% 10.7% savings across that portfolio to get them to the 25th

Unknown Speaker 04:58
percentile.

Unknown Speaker 04:59
Now that's, this is the question I got last month,

Unknown Speaker 05:03
like, so if healthcare IQ has given us good benchmarks on, like, total this is acute, acute focused, or, yeah, yep, purely acute, like, what would get us to 25% of all hospital pricing and then 11% savings?

Unknown Speaker 05:21
I'm shocked too, but we're not to 50% yet, so hold back on that it may change.

Unknown Speaker 05:29
What I got asked last month from Bruce was the question of what percentile is our national program at I told them essentially, like, we're compared against the 25th percentile. On that there's 10% savings, like the math camp math percent savings and percentiles are not equatable, so I can't say the 35th percentile. My man, like, that's not how that's not how this works. I could sing songs, but that's that's not how it works. Yeah. So we had a debate. We had a debate. I thought I squashed the debate, signed sealed and delivered. Moved on. And then last night, he went and started asking other people the same question he asked me last month. So it makes me feel like it's not over, so the debates not over. So I just want to get him what he wants at this point, because he's asked it now we started asking other people.

Unknown Speaker 06:01

Unknown Speaker 06:23
So I

Unknown Speaker 06:25
don't have a way to do it. I tried last night, and then I sent Brian the note, but I don't think I have anything open right

now. Maybe here's one look. For example, I created a lot of that stuff off of just excels and funsies to have something a benchmark against. So this exists, but essentially at a high level. If I give you the rundown real quick, there's the surpass program that we do have analytics for. Here's all the suppliers, here's all the contracts they have, here's the spend analyzed, yada yada yada. And then it's comparing against that top tier in this file. So then it shows us that savings. And so I'm just saying weighting the savings against the spend that's in surpass simple math to get to the best. In mind, what I know he's asking, which doesn't exist in this file, exists somewhere else, is, is the percentiles, like we only pulled in the opportunities, essentially at the best. But in order to do what he's asking, we need to know the best, the 90th, the 75th the 50th. And then where does that price point land in there, which exists? Me see if I can hunt it down for a second.

Unknown Speaker 07:23

Unknown Speaker 07:47
Do Yeah, yep, yep, exist. They're just in individual supplier files of what we have ran. So I'll get there. There. There

Unknown Speaker 08:03
benchmarks in BigQuery anywhere.

Unknown Speaker 08:05
So we do with a big asterisk at the end of it. So our final agreement with them was they would not give us a dump of all of their benchmarks. We have to pull them out of the system manually during the sourcing process. What we do have is we're submitting basically top 35 members in Premiere that give us full data rights. That data goes to healthcare IQ, and we get the benchmarks back for every transaction they're buying. So those top 35 IDNs, it should be a pretty good proxy of what all the population of products are that our members are buying. I'd say 80% or more should be covered in that data set. That's the table that Zach was helping us build on the file that comes back from health care IQ, so it lives in BigQuery. It's just not going to be every single data point,

Unknown Speaker 08:48
okay? But, but should be everything that really matters. Yeah, 8020 rule.

Unknown Speaker 08:54
It's going to cover the bulk of the spend.

Unknown Speaker 08:56
And you did the assessment on those benchmarks, I think early on, like, do we trust those benchmarks pretty well, or does it even matter? They're pretty under salad. Okay, we

Unknown Speaker 09:04
do find an error, you know, here and there, now again, with a u m conversion factor, different for us versus them, or that kind of thing, but they're pretty darn solid. Matt, nice, okay, the suppliers have validated, you know, when we go after and ask them certain questions.

Unknown Speaker 09:19
All right? So we definitely want to align to the healthcare IQ benchmarks. And we've got most of the products that matter in BigQuery, but for those that we don't, we've got some files that Joe you've extract like you've dumped out some benchmarks from their portal to do this. It sounds like, Yes,

Unknown Speaker 09:37
Jenny, Brian pass, so he can talk to that. And here's my spin on it. Is in that team sport I showed you. This is just Ambu, right? So Ambu, this is Joe's opinion, and you guys correct me. I'm not a percentile wizard, but I probably don't have to be dangerous to speak wrongly about it too, because I can tell that we have the

Unknown Speaker 09:57
percentiles. So that's great by catalog number,

Unknown Speaker 10:01

Unknown Speaker 10:51
and now we just need to bake in where to surpass land into these percentiles, to say surpasses at the, you know, 94th percentile of the program, because right now, it's compared against the benchmark low, and that was the only one, Matt that was brought in and over. But it's like we need all of these brought in and over to figure out, where does the surpass one land in here, unfortunately or fortunately, because of what the Ask was. I mean, we did it the right way. Brian, I'll say that I still feel like that, is, we just compared it individually to this 25th to identify the savings so we could tactically go after that savings. So for the National summary, we only looked at the contracts and then looked at it compared to, maybe to the 25th percentile benchmark, not to the entire percentiles to see where it landed in a percentile. So Bruce is asking the percentile question, which is, live somewhere else in a bunch of individual

Unknown Speaker 11:00
files. He wants to know that's my take on a weighted average basis, where, in percentile terms, does the surpass pricing fall? Is that what he's asking?

Unknown Speaker 11:13
Well, it's actually all the contracts surpasses send drive and national, we we have assigned surpass to be low or best price the send drive 10, the National 25th and how we compared it. He's saying, throw that out the window. Just tell me is surpassed at the 98th Nationals at the 37th like, just tell me where the contracts fall in terms of range. But yes, on a weighted average, I would say, is the only way to do this. And that's why I was thinking, if there's a way to quickly aggregate total reported spend on each of the portfolios, overlay the benchmarks, and then recalculate that.

Unknown Speaker 11:47
And one caveat, just so you're aware, Matt, I don't know if you worked with the healthcare IQ stuff much. Their 90th percentile is our 10th. They call it the opposite. Yeah. So it's the same thing. Their methodology is the same. But yeah, 90th percentile is 10th percentile for us, for how, where you'll see that?

Unknown Speaker 12:05
Yeah, and the parts you guys took at first makes total sense to me. So, but I think I get, I just want to make sure I'm really anchored on how Bruce is asking it differently now. So, so I get that he wants to think of each contract in terms of, where does this contracts, unit based pricing fall in percentile terms compared to the healthcare IQ benchmarks? So like contract ppns, 105 is 50. Is 58th percentile pricing.

Unknown Speaker 12:40
When you look at each individual product on that contract, you wait by spend, and you compare it to the healthcare IQ benchmarks, and 58 is going to be a little bit better than median. We're going to go with the higher is better, because that's how HCI Q Does it, right? Okay,

Unknown Speaker 12:56
that's, that's my interpretation of what he's asking at this point.

Unknown Speaker 13:02
Is that

Unknown Speaker 13:06
it's the same thing. He's just asking it differently, and I get it. I don't know what he's anchoring on, but I think he wants to go far or the board and say our national portfolio is at the 45th percentile. Our surpass portfolio is at the 94th percentile of pricing best in class. Like, I think he wants to use that statement either as a selling to members or to car on the board one of the two. Or he's getting asked that one. Because, like I said, I thought I'd diffuse the situation a month ago, apparently did not so that's on me. That's why I didn't look you guys in a month ago, because I thought we were good. I can tell you where it's stemming from. I know part of the other background. So there was an Advent health analysis that we kind of worked through, that the field did, where they said, you know, admins writing all these local agreements, local tiers, our contract pricing is not strong enough. So what we found when we started digging into that is for some of our super IDNs like an Advent 25th isn't good enough on the national I mean, they're getting local pricing. That's more like the 10th of the 15th. So are we shooting for the wrong benchmark, essentially? Should our national portfolio be at a different point? Are we missing the mark in the market for some of these recruitments, I think that's where he's ultimately going with some of that great caveat, maybe it says Brian, and it just jumped in my head. So sorry

if you did and I missed it. The top tier is the asterisk. Sorry, top tier compare. Yeah. So the national The only thing we pulled in was the top tier, and that was a key. Just

Unknown Speaker 13:32

Unknown Speaker 14:08

Unknown Speaker 14:08

Unknown Speaker 14:40
consider top tier pricing in every contract.

Unknown Speaker 14:43
It's a great question. I don't know how to do it any other way. I would imagine the amount of tiers that are on national contracts.

Unknown Speaker 14:52
Like,

Unknown Speaker 14:52
I don't know how to aggregate to say, like, tier one here. Like, if you do access and tier one across the board, like, all of the tiers are not aligned,

Unknown Speaker 15:01
yeah, yep, no. I mean, I'm gonna try to do this, like, programmatically, rather than try to crunch it. So we we have some options. Like, I think it could be possible to go, Hey, ppns, 105 has six tiers. Tier one is 58% percent, 58% out pricing. Tier Two is 64 tier three is 72 right? Like you could, kind of, we could do it that way. The question then that is like, what are, what spin do we use to weight the agreement? So I can look at just the spend that is matched to that contract, meaning, like, that's the best eligible premier contract for that member. I can look at total membership spend. We can look at just program spend. You know, what do we want to use to attach to each product, to volume weighted. The

Unknown Speaker 15:30

Unknown Speaker 15:55
way that we weighted it for what we've done for Joe to date is we've looked at what spend is connected to each of the contracts. So again, the TSA, what has Yeah, yeah. If it's P

Unknown Speaker 16:07
That's how we've we've done it. We just waited it based on what we would expect to be connected to that contract.

Unknown Speaker 16:13
And I'll have to Is there ever

Unknown Speaker 16:15
Gotcha? Is there ever a simplistic version that we take the training wheels and do it with just our pass? Because usually there's one price point. We have 98% of that spend already evaluated. Brian, I mean, like we have that picture for the majority, we just need to look at it from a different lens. I just that seems to be more simpler. So I don't know if you want to do this in iterative approaches and try one on and see how it if it fits the mark of what he's looking for. Essentially, rather than you going through this week's exercise, I don't know, throwing that out there.

Unknown Speaker 16:49
You know, guys, if it helps, like, I think if we get the requirements baked in here, I can feed this into one of our AI tools,

You know, guys, if it helps, like, I think if we get the requirements baked in here, I can feed this into one of our AI tools, and it will do this analysis, and I can produce outputs that you guys just go that looks right, that does not like, rather than you having to go crunch more through Excel, it's one of the coding IDEs that we use now that it's got, you know, the latest AI agent in there does an incredible job of this, like, it's connected to the data. You give it the requirements that actually does the analysis. You just got to be smart enough to catch where, like, things don't pass the sniff test, and you got to push it a little further. So that'd be my recommendation. Like, let's pin down exactly what you think Bruce is looking for and what you want to see. Let me give it to an agent. Let it produce a few artifacts that you can react to with some detail, and then you take a peek. Tell me, yeah, that looks right. Or I got a question on that one, and I just keep pushing at it. And then we can be done in a day or two.

Unknown Speaker 17:47
What requirements do you need answers on?

Unknown Speaker 17:50
Yeah, let me. Let me keep going here. So, So Brian, we're going to use what TSA match to the contract as the spend. Now, when members load locals, I can't remember, does the TSA match contract attach like the local or the security agreement, like I don't want to miss map spend, or is there a separate set of fields that always captures like the best premier contract? I

Unknown Speaker 18:14
don't think there's a field that matches best premier contract. I mean, the member transaction has the contract match type field where it would say that went to a send, drive, national security, local, regional,

Unknown Speaker 18:28
surpass best. So that what I can remember is it's got a hierarchy. And if you've loaded your local and SCA, that's what it's going to match to first. So I don't want to miss attributing spend that's attached to a local when, like, the next best would be the premier national.

Unknown Speaker 18:45
You know what I mean?

Unknown Speaker 18:52
I'll take a look at that. I'll take a look. Okay? Like, yeah, none. Censor, pass spend. All right, so we attach the spend to the contract based on the way it's matched. We will not do different spend at different tiers. We'll just go like, first, we'll do best here. We'll go best here in the contract based on that pricing weighted by all the volume attached to that contract and product past six months past year doesn't matter.

Unknown Speaker 19:22
Six months is fine. Six months based on six months so everything can give us recent six

Unknown Speaker 19:28
Yep, six months volume attached for those that are connected to that contract or have a local on top of it. And we are going to do then a how to

Unknown Speaker 19:43
get to the percentile. So your price is going to be somewhat different than healthcare IQ, like it's going to be a press right? So it's basically look at the price benchmarks that healthcare IQ have provided. They set the market percentiles like they set the boundaries on the percentile. I don't, we don't actually know from healthcare IQ, because they're giving you what, like 10th, 2550 7590, something like that. Yeah, we get low, 10th, 25th, 50th

Unknown Speaker 20:15
and high, I think, are the ones we get from them. I don't know that we go to 75th

Unknown Speaker 20:20
so we don't actually know what, like, the 60th percentile pricing is. And

Unknown Speaker 20:26
then that was my other question. Like, is there a way to interpret and calculate that

Unknown Speaker 20:30
could kind of infer? I don't know. It's a good statistics question. We can see, but like, that's what I got to ground on. Is okay, so, like, my price, yeah, let's just use that top row there. Joe, so for that bracket, if the weighted average price for all of the spend associated with that agreement was $144

Unknown Speaker 20:51
then the

Unknown Speaker 20:54
question is, well, what percentile is that? And I bet you don't actually know, but there may be a way to back into it. We would have to see, and

Unknown Speaker 21:05
it's either that, or we'd have to just spit out a range and say we we know it falls between the low and the 10th or the 10th and the 25th but I think even that would give us enough direction, because to the point of, if the 25th percentile is not where the national top tier needs to be, and we find two thirds of the contracts are sitting between 10th and 25th then we know we need to shift that Mark somewhere in there to maybe 15th or 20th. Whatever it may

Unknown Speaker 21:35
be. Okay. Now we're going to do this at a contract level, so that's a product level, but if I try to roll up from product all products on the contract, or products on the tier, you would, you'd have a difference on each product to HCI Q benchmark that could be different across products. So it's almost like we would, we would aggregate, on a weighted basis, the pricing from all of the benchmarks, giving us like a total spend on the contract, if you were getting, say, HCI Q benchmark, 50th percentile. So if every product was getting that 50th percentile benchmark price, then based on the number of units purchased right, summed by product up, here's how much you would spend on a contract. So we could get a pronto a contract level, total membership spend for each benchmark, then we would do, what's the actual contract level, total membership spend? Right? Fall in that range. And that's, that's the

Unknown Speaker 22:44
question that we're trying to get to, to roll it up to the contract level. That's, that's the only thing I know to do, Matt from a methodology to back into this with a math. Because, again, you're switching from product level to contract level. And I

Unknown Speaker 22:57

Unknown Speaker 22:57
just think you have to do the weighting of the of the SKUs, and let that speak for it, yeah.

Unknown Speaker 23:04
And then that begs the question, if I'm just summing spend on the contract over that window for actual spend, like, when I just use the actual po Well, you know, see, like, I do some the actual spend over six months for that's what they're actually spending and then. But I have to do units times the benchmark to get, like, what they would be spending if they were getting the healthcare IQ benchmark, yeah.

Unknown Speaker 23:27
And there may be a unit of measure or two issue in there. That's, you know, we'll just have to see, okay,

Unknown Speaker 23:31
we have throw out large out. And if I could add one more requirements, I guarantee you Bruce is going to ask this, especially since we invested in healthcare IQ, if we could also add the premier benchmarks in there. So run the same calculation with our premiere How does healthcare IQ 10th for the contract compared to premier 10th for the contract? I guarantee you he's going to ask, is our benchmark better or theirs?

I guarantee you he's going to ask, is our benchmark better or theirs?

Unknown Speaker 23:55
Yeah, that's a great secondary, supplementary comparison. He's gonna go with that. Okay, how do I know what's

Unknown Speaker 24:00
working? I feel like is the question, yeah, you'll say, How do I know what's working? And that's gonna be what he means by that, is internal versus external, yeah, yeah, I already know that. Questions come in. So if we're going down this path, we might as well put it in. Well,

Unknown Speaker 24:15
that's kind of like an interesting secondary, like, hey, if our membership benchmark pricing is better than the healthcare IQ national image, then we're doing better. That's

Unknown Speaker 24:27
what sold us on healthcare.

Unknown Speaker 24:31
Yeah, all right, better

Unknown Speaker 24:33
than

Unknown Speaker 24:33
ours.

Unknown Speaker 24:36
So by contract, all three programs, six months, we got through how to attach the spend. We talked through how to try to get a percentile on the contract. If we can, we do it by tier as well. That'll

Unknown Speaker 24:53
be a little harder. We don't need that first. So, yeah, okay, so give me, give me a day to let this spend. I will give you a view. That is the contract level assessment, so I don't know, 600 something contracts. And here's the actual member spend. Here's the spend. If you're at each of the healthcare IQ benchmarks for the products that had benchmarks, right? We'll have to do, like, some amount of, like, here's the spend that was on a product, was it for which we don't have a healthcare IQ benchmark? And, like, what? How much gap is that? If it's 10% a cent, we don't care, right? But if it's 50% of spend, then we got to go digging and get the actual price benchmark for that. If

Unknown Speaker 25:33
healthcare IQ didn't have a benchmark. We just excluded it from what Joe was showing earlier. I mean, we had to make some assumptions. We

Unknown Speaker 25:39
had to go with what we had data points on.

Unknown Speaker 25:42
Yeah, and if it's like, you know, I don't care if it's 10,000 products, but it's only, you know, 10% of the volume it's it's not gonna matter. So, okay, okay, and then I'll try to get a couple of like, detailed export views so you can see, like the walk and the data. And if you guys can validate that and tell me if that meets the need, then we'll try to roll it up together get it back.

Unknown Speaker 26:09
Where do you get the H, IQ, those columns from? Is that we got to get that to you, or they're in that table. Do you have the table name, Brian, by chance? Or

Unknown Speaker 26:21

gonna say, I look back at my

Unknown Speaker 26:22
emails that gave us the table, the final table last month. Okay, also those individual supplier file that pull up as an example. You have a all inclusive

Unknown Speaker 26:33
file? Can you show me that SharePoint location again, where you were getting it and share that with me, just in case we need to go pull that up. I'll drop in the

Unknown Speaker 26:46
chat

Unknown Speaker 26:50
the direct link. Do?

Unknown Speaker 26:59
Yeah, I guess, just going back like that assessment you did initially, I am stunned that our national pricing looks anywhere close to that good. I just does it feel around our national I guess it's best here national. So maybe, maybe that's why. But best tier national, yeah, I need access to that SharePoint folder, if anybody has it, share Oh, yep, right now.

Unknown Speaker 27:28
And the only thing you may want to connect with Zach on Matt about that table that I just sent you with the healthcare IQ stuff. My understanding is each month, when a file comes in, it's going to be a full dump of all transactions for six months. So like, it'll say product, supplier, SKU, 123, and then it would be labeled like, February 2026 it would be the benchmark as of when we received the data file in February 2026 there's also going to be another row that another row that's gonna say January 2026, and it'd be the snapshot we received when the file came in that month. So we would need to run it against just whatever the most recent latest is in there. That's my

Unknown Speaker 28:06
understanding of how that table is going to be populated.

Unknown Speaker 28:10
Awesome.

Unknown Speaker 28:13
Okay, any other Gotcha? So you guys ran into or something, to tell the agent to look out for

Unknown Speaker 28:20
nothing that I can think of, at least in the beginning. But what I would say is if, if there's something, we can actually stand up, this would be an amazing thing to see, ultimately, in a automated dashboard that's an ongoing monitoring tool. That's kind of where we wanted to go anyways, with bringing these benchmarks in house, but this would give us an aggregate view for the sourcing teams to see, separate from the product level view that we give them for negotiations.

Unknown Speaker 28:43
Yeah, awesome. Yep. Anything we build this way, you should be able to roll it into a pipeline.

Unknown Speaker 28:50
So I did do some

Unknown Speaker 28:55
exclusions, I guess, out of this. So let me find that for a second here.

Unknown Speaker 29:04
I pull it up,

Unknown Speaker 29:10
meaning in

Unknown Speaker 29:14
the dashboard that I showed you with those three buckets, there was some categories that were excluded, and that is because of either expiring contract or just not the focus for whatever reason being something or another, for example, like we didn't run CRM.

Unknown Speaker 29:38
So

Unknown Speaker 29:40
depending on Brian's link versus these individual files as a backup plan, we might have to go to an exclusion list and grab some more data. But like CRM, contrast media, some of that CPTs weren't in there, and sometimes H IQ could be significantly lacking in that area. Or

Unknown Speaker 30:03
I think we need to draw a big asterisk on all this.

Unknown Speaker 30:07
CRM is heavily dependent upon rebates. Hciq does not have rebates. It's not a landed cost. It is a price point which people are paying. So we've got to put somewhere in the notes of this thing, if it grows legs and get out so people like, non inclusive of rebates or other value ads that a supplier may throw in on the back end that we don't have information to and so,

Unknown Speaker 30:29
yeah, that's a great point. Made me think too that some of these categories, the health system extracted ERP spend is going to be incomplete representing their like contrast media, they might get a lot through pharmaceutical wholesale. So it's not they're not ordering it in Workday, right? It's like they get an invoice in Workday, but they ordered it through the wholesaler platform. So wherever that's happening, our volume weighting is wrong. So is our perception of total spend and pricing. So those be good call outs where that's relevant.

Unknown Speaker 31:02
Yeah,

Unknown Speaker 31:04
those are the big ones I'm looking at the corner of my eye was we took out s 2s because we cancel those contracts, let's take out that swap. You get into contrast media categories, the Mr. The ultrasound, all that, and then CRM and DS, like, those are the big ones. I would say that we excluded s to s, CRM, DS, but gives you the more that comment is probably sent around the rebate piece of it,

Unknown Speaker 31:35
which actually inflate should inflate each

Unknown Speaker 31:38
IQ, so it should make us look better on percentile.

Unknown Speaker 31:41
To be honest, won't ever been in either like, what I'm Yeah, mostly what I always call blanded Spin like, when it comes in the door and base spend is when you take rebate out. But there's no, very few health systems that are actually using our little tool that goes and backs out rebate, or no, that just backs out distributed markup by only anything it's capturing rebate adjusted costs like the invoice would. But or not, I don't know. Maybe the rebate comes in separately on the I don't think our data has any good incorporation of the rebates effect on the total cost, which aligns us with the aciq approach, right? Like, at least we're apples to apples in that way. Okay, when we probably going to want to go the national program will put you at the 38th percentile price in the market. The sin program will put you at the 21st

percentile price in the market. So we'll have to think about because what I'm going to get back going to get back to you next is at the contract level. So then, how do we take the contract, you know, 400 national contracts, and do an aggregation of that? I'm almost saying it's service

Unknown Speaker 32:48
line level at minimum. Let's see, like, how does the nursing portfolio stack up against the PPI portfolio, or what have you I mean, some cuts like that be beneficial,

Unknown Speaker 32:58
yeah. But product to contract, we probably should be able to do the same thing to service line.

Unknown Speaker 33:06
It's fun. One, okay, cool guys, thanks for the context. I'll get something back to you as soon as I can. You'll get something from me by tomorrow morning at the latest.

Unknown Speaker 33:16
Appreciate it, Matt, thank you. You bet certainly somebody can do faster than we can.

Unknown Speaker 33:21
We'll see. Yeah, it takes, like I said, it's amazing, but you got to have a sharp eye for where it just didn't have enough context. And then you guide it and it gets it back on track. So that'll be the task on our end. Okay, sounds good, yeah, all right, yes. Thank you. Bye.

how fast time fly. Sometimes you look up you're like boy it's gone by a month already and then another month.

So, this is a dashboard, out of the value assurance group that we have created, essentially, Matt, what this is

it's the same thing. He's just asking it differently, and I get it. I don't know what he's anchoring on, but I think he wants to go far or the board and say our national portfolio is at the 45th percentile. Our surpass portfolio is at the 94th percentile of pricing best in class. Like, I think he wants to use that statement either as a selling to members or to car on the board one of the two. Or he's getting asked that one. Because, like I said, I thought I'd diffuse the situation a month ago, apparently did not so that's on me. That's why I didn't look you guys in a month ago, because I thought we were good. I can tell you where it's stemming from. I know part of the other background. So there was an Advent health analysis that we kind of worked through, that the field did, where they said, you know, admins writing all these local agreements, local tiers, our contract pricing is not strong enough. So what we found when we started digging into that is for some of our super IDNs like an Advent 25th isn't good enough on the national I mean, they're getting local pricing. That's more like the 10th of the 15th. So are we shooting for the wrong benchmark, essentially? Should our national portfolio be at a different point?
